

# CLIMART

## INNOVATIVE METHODOLOGIES FOR LEARNING CLIMATE CHANGE THROUGH ART AND THEATRE

May 2022

**WE ACT.** Within the last month the heart of the climART project came to life. 100 students from four different countries in the EU developed a theatre play on climate change. The students started their work after a big virtual meeting in 2021 with all the participants. The students got the chance to get to know each other and to present their own school and city. Through this, the international cooperation became more visible to the students and they realised that they are part of a big international group that fights climate change.

**PREMIERE.** In front of friends, families and school staff the students presented their theatre play. The audience has been confronted with the view of a generation, that grew into the climate change without being responsible for it. The students processed their feelings towards that overwhelming task to stop and live with the consequences of climate change. They grew up with a lifestyle that is quite the opposite of sustainable and farsighted, so they need to find new ways of living.

Feelings of fear, boredom, anger or guilt surround them, but also empowerment and the outlook on a better future they can build for themselves.

**MULTIPLIER EVENTS** During the project period the teachers organised multiplier events to share the goals and results of the project with other schools and teachers. The idea of laboratories, that combine artistic and scientific approaches, is introduced and is hopefully even adopted.

**LTTA 2 - Learning, Teaching, Training Activities**  
In March the project members planned this journey all together in Spain. Meeting in person is crucial for the project.

The personal bonding supports collaboration and effective development of plans and content. Furthermore we got to know the Spanish school and the area, where some of the students live, which makes it easier to connect with the students later on in Brussels.

Co-funded by the  
Erasmus+ Programme  
of the European Union

This project has been funded with support from the European Commission. This publication [communication] reflects the views only of the author, and the Commission cannot be held responsible for any use which may be made of the information contained therein.

## IO5: Thematic laboratories for theatrical performances

Each participating school worked intensely on their very own theatre play on climate change. The students and teachers developed confidence and knowledge on the topic and are very proud to present their plays to friends and families.

### Trip to Brussels with 100 students

After a long perseverance we are finally able to travel to Brussels. This journey is the final event of the project and allows the project partners to meet in person and to visit the place of the EU parliament - the place of important political decisions regarding climate change. The students are very excited to meet each other and to travel again after such a long time of covid restrictions. They do not only get the chance to meet students of their own age from different countries, but also present their theatre plays in a theatre in Brussels. The magic of a theatre stage will unite them and make them proud and confident about their achievements.

- 1st day > full day with theatrical activities (IO 3)
  - > developing a flash mob against climate change
- 2nd day > theatrical performances of each school
  - > Q&A (question and answer) and feedback round
- 3rd day > Workshop with professional performers
  - > Feedback on the project

During their stay in Brussels the participants can benefit of the IO 3, that collects theatrical activities for students in order to bring them into a space of creativity and enable them to work together on a flash mob. In a group they gain confidence to perform the flash mob in a public place in Brussels in order to draw attention to the topic of climate change.
